

Rules of Air Domination

In "Air Domination," players aim to complete military missions and win medals to determine the overall winner. The game features both Player versus Player (PvP) and Player versus Environment (PvE) elements with possibility to play solo or in teams.

Board Setup:

- Place the center board (no9) in the middle of the playing area. The orientation should be random.

- All players roll a dice; the highest roll goes first.
- The first player randomly takes a base board (no2, 4, 6 or 8), which defines their base (aircraft carrier) and places it to connect with the center ensuring the red border line to be on the outside of the map. This red line indicates the perimeter of the map.

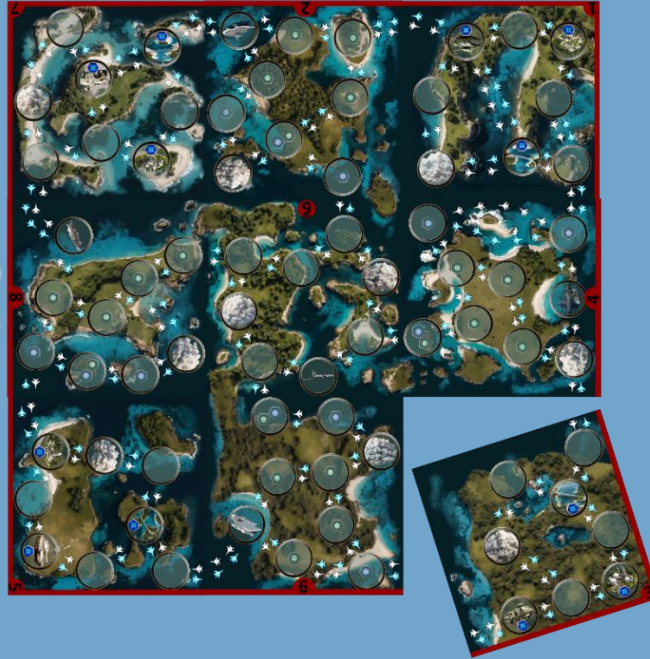

- The first player then randomly takes a corner board (no1, 3, 5, or 7) and places it to the right of their base.

- Repeat this process until all players have 1 base and have placed one corner board.
- **Map Completion:** If there are fewer than 4 players, place the remaining bases and corner boards to complete a full map, consisting of 1 center board surrounded by 8 boards.

Example Map:

Carrier Cards and Jet-Fighter Cards:

- The first player selects a Jet Fighter and picks up the equivalent Carrier Card, Jet-Fighter Card, and Jet-Fighter Tokens. There are four Jet Fighters and their carriers to choose from.

Dassault
Rafale

3x

J-20
Mighty
Dragon

3x

F-22
Raptor

3x

Sukhoi
Su-57
Felon

3x

- Each player positions the Jet-Fighter Card and Carrier Card vertically or horizontally in front of them, according to their preference.

Game Components

Each player selects one of the Jet-Fighters. Gold, Bronze, Black and Silver.

Equipment Tokens

- These tokens are used by players to perform actions such as dropping a bomb, launching a missile, speeding up, or making a turn.

Air-to-Air
missile

Bomb

Turn
direction

Air-to-Ground
missile

High Speed

- **Carrier Warehouse:**

- When the player receives an equipment, it is placed on the carrier's warehouse on an empty storage.
- The maximum amount of equipment that can be stored is eight (8). Any additional equipment will be discarded (returned to the 'sack').

- **Carrier Jet Fighters:**

- Those tokens represent the amount of Jet Fighters the player still owns. This is equivalent to how many times a player can take off after being shot down. Each time the player takes off with a new jet fighter one of the tokens is removed.

AIR
DOMINATION

Dice

There are three types of dice, each serving a different purpose:

1. **Movement Dice:** Used for airplane movement on the board.
2. **Attack Dice:** Used to determine a successful air-to-surface or air-to-air attack.

Two chances with an equipped **bomb**. Used only against ground/water targets.

Two chances to hit with an equipped **air-to-surface missile**. Used only against ground/water targets.

One chance with an equipped **air-to-air missile**. Used only against airplanes.

One chance with the machine gun (**bullets**). Used only against airplanes.

3. **Defensive Dice:** Used to determine a successful defense against a jet fighter. This is rolled by players when another player steps on a defense area they control and it's their defenders turn to play.

The defensive jet-fighters can make use of the machine gun (**bullets**) to bring down a Jet Fighter.

The defensive ground or sea positions can make use of the **ground-to-air** hit to bring down a Jet Fighter.

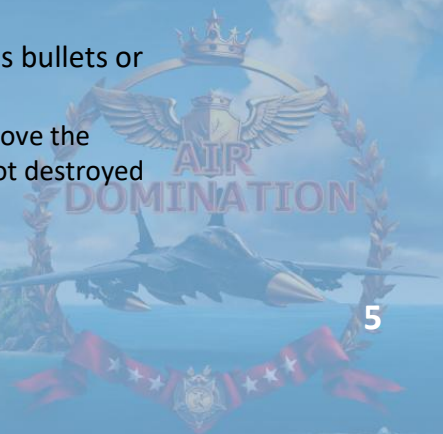

The defensive jet-fighters can make use of the **air-to-air missile** to bring down a Jet Fighter.

Unsuccessful attack/defense:

- An "empty" result means the airplane is not destroyed.
- The airplane is also not destroyed if the defensive unit is an airplane and the dice roles ground-to-air.
- Similarly, if the defensive unit is ground or sea and the player roles bullets or air-to-air missile once again the airplane is not destroyed.
- The same logic applies to attacks. If the attack is done using a bomb (above the target) and the player rolls an air-to-surface missile then the target is not destroyed and the bomb is discarded (missed).

Example: A Carrier card with equipment placed and jet-fighter tokens placed. Two Jet-Fighters are still available. The Carrier warehouse has 4 equipment stored and capacity for 4 more equipment.

- Equip the stored tokens by moving them from the warehouse onto the Jet Fighter card. There are no limitations on the number of equipment to be moved from and to the jet-fighter.
- Up to 7 pieces of equipment can be equipped in parallel. Note that the machine gun (bullets) on the jet-fighter cannot be replaced with a different token.

Example: A Jet-Fighter card equip with 1 bomb, 2 speed-up, 2 air-to-air missiles and 1 air-to-ground missile. Note that there is one more space that could have possibly been used.

- Equipment can be loaded on the Jet Fighter card only while the jet-fighter is on a base (aircraft carrier) or an ally's base.

Player Setup:

- Each player draws randomly:
 - 8 equipment tokens.
 - 2 defensive tokens.
 - 1 factory token.
 - 2 mission cards.
- When all players get the defensive tokens and the factories the remaining defensive and factory tokens are placed in the sack along with the equipment.

Mission Cards

- These cards represent the missions that the players need to complete.
- Each player, or team of players, receive two missions at the beginning of the game.
- Every time a mission is completed, it is replaced with a new one.
- The missions cannot be abandoned.
- Symbol 'T': Indicates a position that can be a target. All mission cards are targets. The white number at the bottom-right corner of the mission card indicates the location on the map (board number: 1, 3, 5 or 7).
- Symbol 'D': Some of the missions also have the symbol 'D', to inform the player that they might be owned by another player and can defend themselves. If it is owned by the same player or an ally then the mission card is discarded and the player picks up a new one. The same happens if the defensive unit is not on the map at all.
- Symbol 'PvP': Some missions have the PvP symbol. This indicates that the target is an enemy player. If that player is not in the game discard the mission as soon as you take it and pick up a new one.

Example Mission cards with indicator (D) for defensive unit or (PvP) for enemy player.

Defensive Tokens:

Ground Defensive units:

Sea Defensive units:

Air Defensive units:

Reinforcement Tokens

- There are four factories in the game that can be owned by players, providing +1 equipment token at the start of each player's turn. The number is used to locate it easier on the map. If that factory is not in the game discard the mission as soon as you take it and pick up a new one.

- If a factory is destroyed by an enemy, it is removed from the map and no longer provides equipment to the player.

Setup of defense:

- The defensive units can be a jet fighter, a ground anti-air weapon or a ship. All defense and reinforce tokens should be placed on a tile at the board of your carrier (base) [2,4,6 or 8].

- Factory:** It needs to be placed on a ground location, indicated by the green 'ground' symbol.

- Ships:** Can only be placed on tiles with a blue 'sea' symbol.

- Ground anti-air weapons:** Can be placed on tiles with 'ground' symbol.
- Jet fighters:** Can be placed on either sea or ground tiles.
- Tiles with both ground and sea symbols can host any unit except the factory which needs to be on a ground only tile.

Example of possible locations for a ground unit.

Initial Placement: All players place their jet fighters at their own aircraft carrier (base).

Jet Fighters move only between tiles connected with white and blue airplane symbols.

The jet fighter cannot move directly to the bridge with one movement.

Example of two ways to move from 0 to 4. Both ways the die should roll a 4, but they will finish with the jet fighter facing a different direction.

Steps in every turn:

1. Reinforcements:

- Each player receives the reinforcements and places them on their Carrier warehouse. 1+1 equipment.

2. Movement:

- For this 1st move the player can choose the direction the airplane will move after rolling the dice. After that the direction can only be changed at a turning point (refer to the "Changing Direction" section) or if the equivalent equipment is used.
- The direction of the Jet-Fighter is very important and it always needs to be visible which one it is. Especially at the crossroads the jet-fighter needs to point clearly to a specific tile that it will move during the next round. The player needs to decide the direction during the end of the movement and not at the beginning of the next movement in the next round.

3. Attack: When the movement is completed, if the player is in range to attack and chooses to do so, should:

- State what the target is.
- Choose the equipment to be used for this attack and removes them from their Jet Fighter card.
- Rolls the attack dice.
 - a) Destroying a mission card target: The player is rewarded with a medal and receives 3 equipment tokens in their carrier's warehouse.
 - b) Damaging the enemy: A player might choose to hit a target even if the target is not a mission for them. In those cases, they don't get rewarded with a medal and equipment.
 - Destroying a factory: The factory token is removed from the map and going forward it will no longer provide a +1 equipment per turn.
 - Destroying an enemy defensive unit: The defensive token is removed from the map and going forward it will not be there to defend the area.
 - Destroying an enemy Jet-Fighter: The enemy loses that Jet Fighter and all the equip equipment tokens.

Note that destroying a factory, defensive unit or enemy Jet-Fighter as part of a mission, gives both the rewards (a) and damages the enemy (b) as well.

- c) Missing: The target is not destroyed and the attack phase is finished for that player. If a player does not have the weapon that the dice rolled or did not indicate its usage then the target is not destroyed.

4. Defense: The last step for a player is to check if they have a defensive unit that can hit an enemy Jet Fighter.

- State which defensive unit aims at which enemy Jet Fighter.
- Roll the Defensive Dice
 - 1. Destroying an enemy Jet-Fighter: The enemy loses that Jet Fighter and all the equip equipment tokens.
 - 2. Missing: No action. Reroll the defensive dice if there are more defensive units in range of enemy Jet-Fighters.
- The player ends their turn.

Game Mechanics

Defensive Area (Range)

- When a jet fighter ends its turn on a defensive area, those defenses attack the jet fighter if they do not belong to that player or an ally.
- The opponent controlling those defenses rolls the defensive dice during their turn.
- Every land or sea defensive unit can hit at the same tile and also every adjacent tile.

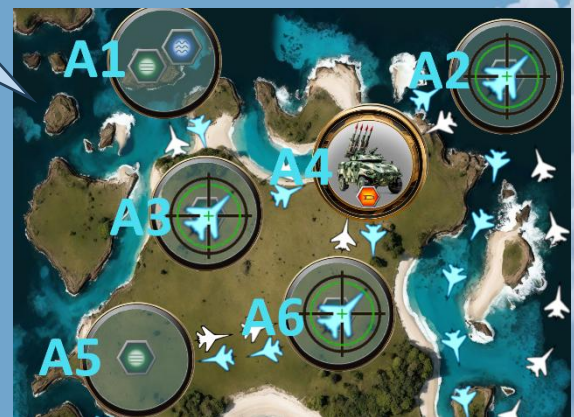

Tiles A1, A3 and A4 are in range and can be defended. Tiles A2, A5 and A6 are out of range of defense.

In this example the defensive unit on tile A3 can only defend tile A4. Tile A2 is within range but is a cloud giving invisibility to the Jet-Fighter and tile A1 is out of range.

The range for the defensive unit in tile A4 is: A2, A3, A4 and A6 since they are all adjacent to A4.

When the defensive unit is a Jet-Fighter then it aims only towards one and only direction. In this case it is A4. Tiles A1, A2 and A3 are not defended by this defensive unit.

For the defensive Jet Fighter to protect A1 it needs to be facing (pointing) at A1. Rotate the token accordingly. Now A1 is going to be defended and A2, A3 and A4 will not be defended.

Note that the defensive Jet-Fighter in all cases is limited to defend only 1 tile but it has higher chances to hit since there are two chances to be successful with Machine Gun and with Air-to-Air missile which are always available for the defensive Jet-Fighters.

Target Area

When a jet fighter ends its turn on a target area, the player can choose to attack the target.

1. Attack Options:

- **Machine Gun (Bullets):** Always equipped (unlimited use). Can hit only airplanes.
- **Air to Air Missile:** Must be equipped. Can hit only airplanes.
- **Bomb:** Must be equipped. Can hit ground targets, sea targets and factories.
- **Air to Surface Missile:** Must be equipped. Can hit ground targets, sea targets and factories.

2. Attack Procedure:

- After landing on the required tile, roll the attack dice.
- Success rates: 10% for bullets, 10% for air-to-air missiles, 20% for bombs, and 20% for air-to-ground missiles.

3. Air-to-ground Missile Attacks:

- If the jet fighter lands on a tile before the target, only an air-to-surface missile can be used.
- The missile must be equipped for this action and the success rate is 2 in 6.
- The missile token will be removed upon usage regardless if the target is destroyed or not.

In this example the Jet Fighter is located on the A2 tile with direction towards A1. From this position it can fire an air-to-ground missile and hit the ground target at tile A1. That makes A2 the needed destination for the Jet Fighter. Note that the missile would not be possible to be fired from any other location, A1 or A3. If the Jet Fighter was moving towards A3 position A2 would also not allow the air-to ground missile to be fired towards A1. Position and direction play a role in the ability to hit the target.

4. Bomb Attacks:

- If the jet fighter lands on the tile of the target a bomb can be dropped to hit it.
- A bomb must be equipped for this action and the success rate is 2 in 6.
- The bomb token will be removed upon usage regardless if the target is destroyed or not.

Here the Jet Fighter is located on A1 and can drop the bomb on A1 ground target. The direction of the Jet Fighter does not matter.

The bomb cannot be dropped from A2 or A3 if it is to hit A1. From A3 it can be dropped to hit ground target at A3.

Equipment Usage:

- Used equipment returns to the sack. Usage is based on the player's declaration, not the dice outcome. For example, if a player declares they are using a missile, it is considered used and returns to the sack regardless of the hit's success.

Air-to-Air Combat

- If the target is airborne, the following weapons are used:
 - **Machine Gun (Bullets):** Always equipped (unlimited use).
 - **Air to Air Missile:** Must be equipped.

1. Air-to-Air Attack:

- The player decides whether to use an air-to-air missile.
- If used, the missile is launched, and the equipped token is removed regardless of the outcome.
- The chances of bringing down an airplane are up to 2 out of 6 if an air-to-air missile is equipped and used [one with the machine gun and one with the air-to-air missile].
- If there is no air-to-air missile or the player chooses not to use it then the hit can be done only with bullets which is 1 out of 6 chances to succeed.

2. Engaging an Enemy:

- During movement, you might engage an enemy player if your movement ends one tile that is not facing an enemy fighter (behind or side tile).

The gold player located at A1 can attack the silver player at A2. Just like the silver player can attack the defensive unit at A3.

- The player can attack by rolling the attack dice.
- The target can be destroyed using the machine gun (bullets) and the air-to-air missile, provided the missile is equipped.

- Bringing down an enemy does not require it to be a mission. It can slow down the enemy and make them lose all equipped tokens. The player might want to choose not to attack though.

3. Dogfight (Face-to-Face):

- If two fighters land in adjacent squares facing each other, the player arriving in this position can attack.
- If unsuccessful, the 2nd player, during their turn, has the option to either roll the movement dice and leave the fight, or instead stay there, entering a dogfight and making use of the attack dice.

Choosing to do that means they will not roll the movement dice after the attack. Entering a dogfight means staying in place to engage in combat.

- This continues until a fighter is shot down or a player instead of attacking, leaves the dogfight. To leave the fight instead of rolling the attack dice the player needs to roll the movement dice which marks the disengagement (end of the dogfight).

4. Dogfight Over Defenses:

- If a player engages an enemy fighter above enemy defenses, the player fight occurs first, followed by the defenses striking.
- The players cannot hit both ground targets and air targets in the same turn. They need to state what they hit and what equipment they use before they roll the attack dice.

5. Easy Target:

- If a player lands one square in front of another player, the latter can engage (roll the attack dice) when their turn comes.
- The player engaging can choose to attack which means they will not move that turn or roll the movement dice instead to leave without attacking the enemy player.
- The player ahead cannot strike and must roll the dice on their turn to leave, if they survive.

Preparation for a new game:

- Place all equipment tokens and any unselected defensive tokens in the 'sack'.
- Mission cards are placed face down.

Start of every turn:

1. Receive one token from the sack for the new round.
 - Remember that received tokens are placed in the aircraft warehouse, not on the jet fighter.
2. Receive another token if the player has a factory.

1+1 equipment token -> roll movement dice or stay in a dogfight

Aircraft Carrier (Base):

1. Landing on the Carrier:

- When you land on the carrier (Base), you finish your turn there.
- You can land on the carrier even if you have more movement tiles left. For example, if you are 3 squares away from the carrier and roll a 5, you can still land safely, forfeiting the extra movement.

2. Taking off from the Carrier:

1. Receive one token from the sack
2. Receive another token if you have a factory
3. If you have exceeded the 8 equipment in the storage, choose which 8 you will keep and return the rest.
4. Equip the Jet-Fighter by moving equipment from the storage of the carrier to the Jet Fighter card and vice-versa.
5. Roll the movement dice to move.

Completing a Mission

1. Mission Completion:

- To complete a mission, destroy the mission target.
- Upon destruction of the mission's target:

1. You receive one medal. All medals have the same value.
2. You receive three (3) equipment tokens, which are placed in the carrier's warehouse if there is space. If there isn't, you get to choose if you want to replace your existing equipment and return any excessive equipment in the 'sack'. Remember you can have only up to 8 equipment in the carrier warehouse.

3. The player returns the completed mission card at the bottom of the pile of the mission cards and receives a new mission.

Receiving Equipment: A player might get a defensive token or a factory instead of a typical equipment during the game and they can place it on their board. Each player can have multiple defensive units and factories. Even if this might be extremely rare, if they have no more places in their board, they can expand their defensive units to the board on their right.

Rearranging Defensives: The players can choose to relocate the defensive units but during that turn they do not defend against enemy jet fighters. The factories cannot be relocated. The relocation can happen only during the player's turn.

Jet Fighter Destruction

1. Destruction of a Jet Fighter:

- If a player's jet fighter is hit by a defensive unit or another jet fighter, the player instantly loses the jet-fighter and all equipped tokens equipped on it.

- If the player has more jet fighters on the carrier, they can re-enter the game. Entering the game with a new jet fighter:
 1. Remove one jet fighter token from Carrier to place a Jet Fighter back on the map on the carrier position.
 2. Receive 1 equipment token.
 3. Receive a 2nd equipment token if a factory is owned.
 4. Equip the new jet fighter with equipment form the warehouse.
 5. Roll the moving dice and then choose direction and take off.

Changing direction

1. Maneuvering in the Clouds (Turn Using Clouds):

- Clouds allow planes to change direction.
- They can be used at the player's discretion but cannot be used twice within the same turn. The player can choose to pass through the clouds without changing direction.
- Turning can help a player to end up on a mission area or be used as a maneuver to avoid or attack another player.
- The player needs to move in and out of the clouds to complete the change of direction. If the player lands on the clouds the turn cannot occur and during the next dice roll the player will continue to the same direction as before entering the clouds.
- Example turn:

- Highlighted with yellow is the initial position of the Jet Fighter with its current direction towards the East (right).
- The player rolls the dice for a 5 and follows the red path.
- Moves to the 1st position, then to the 2nd which is a cloud. At this point, between the 2nd and 3rd move, the turn happens. The direction changes and the path is now highlighted with green. The Jet Fighter moves to position 3 and then continues to position 4 and finishes the turn at position 5.
- Highlighted with blue is the final position of the Jet Fighter after playing the 5 moves and making use of the clouds to turn. Note that the Jet Fighter is now facing the West (left).

2. Invisibility of the Clouds (Stealth):

- The clouds offer an invisibility to the Jet Fighter that sits within that tile. That means that it cannot be attacked. On the other hand, the Jet Fighter in the clouds can take a target outside the cloud and strike.

3. Turn token:

- A player can use the turn token to turn at any tile of their choice (without being a cloud). The player needs at least a movement of 2 (roll 2+) to achieve the turn. Then the token is discarded.

Full Speed Token:

- After rolling the movement dice, a player can use the Full Speed token (if equipped) to double the dice value. The token is then returned to the sack. Only one token can be used at a time.
- Please note:
 - The player can decide to use the token after seeing the dice roll.
 - The movement is doubled completely (e.g., roll 4, use the token, move 8).
 - Just like in every normal movement, the player cannot split the move in half and attack in between the movement. After moving all the positions then the player can attack.

Play Modes

1. Flying Solo Mode:

- Players: 2 to 4
- In solo play, each player is on their own, and all other players are enemies.

2. Alliance Mode:

- Players: 2 vs 2
- Players form alliances and cooperate on missions.
- Alliances cannot be changed mid-game.
- Each alliance starts with 2 missions, which either ally can complete.
- Only the player who completes the mission receives a medal and the 3 equipment tokens.
- Allied carriers cannot exchange equipment tokens.
- A player can land on an allied carrier to load any equipment from that carrier's warehouse onto their jet fighter.

Winner of the Game

Victory Conditions: Achieve Air Domination or Air Superiority.

- **Air Domination:**

1. **Solo Mode:** The winner is the first player to acquire any three (3) medals by completing 3 missions.
 2. **Alliance Mode:** The winning team is the first to collect a total of five (5) medals.
- **Air Superiority:** Destroy all the Jet-Fighters of your opponents to win the game.

DOGFIGHT FRENZY

In DogFight Frenzy mode, pilots can engage in a Dog Fight even when landing on the same square, regardless of direction. (as shown in the pictures).

During DogFight Frenzy, players can also take turns rolling the dice until one wins or disengages from the battle.

 **VANIL**
GAMES
